SS&C | Intralinks ®

Protect Your Data with Industry-Leading Security

At Intralinks, security is at the heart of what we do. Our platform is fully validated and the first VDR to offer ISO 27701 certification – the standard in data privacy.

Your security is our business

Our mission is to protect your deal and its data through an ecosystem that's focused on security for you, your customers and your partners.

Our dedicated security teams — IT security professionals, lawyers and auditors — empower you to leverage our technology with complete control, privacy and confidence.

Our world-class security and compliance best practices extend across all Intralinks people, processes, policies and supporting infrastructure.

We have you covered every step of the way

Intralinks provides security at all levels, taking a holistic, multi-channel approach to keeping your data protected and safe.

Document	Application	Platform	Operational

Document Security

Lock down, control and protect files wherever they reside to secure the flow of information.

Platform Security

Protect data against external threats and meet security and architecture requirements across the enterprise.

Operational Security

Obtain ISO and SOC2 certification reports, and other artifacts, to seamlessly comply with any required internal protocols throughout the lifetime of the relationship.

Application Security

Secure, control and track information through roles, granular permissions and auditable workspaces.

intralinks.com/contact

World-class security from an award-winning company

With security that's built in – not bolted on – you never need to worry about the safety and privacy of your data with Intralinks.

Process

Our advanced security-management tools and procedures ensure your data is completely secure

- 24/7 continual security assessment and monitoring on production instances
- Formal Secure Development Lifecycle with automated security analysis for all our products and services
- Weekly vulnerability scans of production infrastructure

Infrastructure

Our multi-layer infrastructure defenses protect against data-tampering attacks and other threats

- Building Security-In Maturity Model (BSIMM) framework with integrated software security checkpoints and activities
- End-to-end encryption with dedicated security-testing environment for customers
- Identity Services offer an added layer of authentication for greater data security and platform flexibility

Expertise

Our security, privacy and compliance professionals work with customers to successfully pass internal and regulatory reviews

- The first VDR provider with ISO-27701 certification
- Industry-specific certifications
- Trained and certified security champions in each development team
